ABSTRACT

This report prepared for the California State Postsecondary Education Commission concerns base factor calculations for comparison institutions and study survey instruments. The report is divided into three sections. The first section, which comprises most of the volume, presents documentation for the calculation of space factors used in the report, "Survey of Space and Utilization Standards and Guidelines in the Fifty States." It provides 173 prototypes for classrooms and teaching laboratories, classified by student level, for the research university system, state university system, and community college system. The second section includes a blank copy of the telephone survey instrument used to gather preliminary information from all states about their use of space standards/guidelines and their capital facilities budgeting process. Blank copies of the data collection and opinion surveys used in the site visits are presented in the third section. (GLR)

# 1 Documentation of Space Factor Calculations

This volume of material includes three sections. The first section, which comprises most of the volume, presents documentation for the calculation of space factors used in the report, *Survey of Space and Utilization Standards and Guidelines in the Fifty States*. The second section includes a blank copy of the telephone survey instrument used to gather preliminary information from all states about their use of space standards/guidelines and their capital facilities budgeting process. Blank copies of the data collection and opinion surveys used in our site visits are presented in the third section.

---

We have strived throughout the final report to provide sufficient information for readers to duplicate our calculations of space factors or total assignable square feet used to compare California's space and utilization standards/guidelines to other states. To avoid overburdening the final report volume with formulas and calculations, base factors reflecting space allowance for the different categories of space derived by applying the standards/guidelines of each state have been calculated in this section. These base factors are presented in the survey report exhibits and adjusted, in accordance with the procedures outlined in Appendix A of that report, to reflect differences in enrollment counting periods and time of day enrollment counts.

Calculations are presented by type of institution -- research university, state university, and community college -- in alphabetical order by state, beginning with California. Within each state, calculations are presented for all categories of space for each prototype higher education system. Each page presents a single base factor calculation for a prototype system. Each page presents a single base factor calculation for a prototype system, type of space, and one or more levels of student.

## 1.1 *Classrooms and Teaching Laboratories*

General formulas for deriving classroom and teaching laboratory standards are as follows:

For community college or state university systems:

$$(SSS) \div (WRH * SOR) = ASF/WSCH$$

and for research university systems:

$$(SSS * WSCH/FTE) \div (WRH * SOR) = ASF/FTE$$

Where:

- SSS = Student station size.
- SOR = Percent time station is occupied.
- ASF = Assignable square feet.
- FTE = Full-time student.
- WRH = Hours rooms are assumed to be used.
- WSCH = Weekly student contact hours.

Most states include allowances for support space, such as equipment storage areas in classrooms or lab preparation space in teaching labs, in their published space standards. However, some states provide separate allowance for support space. In such cases, student station sizes (SSS) are adjusted on the worksheet tables which follow to reflect these proportional or constant allowances. The resulting total assignable square feet per student station (TASF) is then used as the student station size (SSS) in the formula to calculate the base factor space allowance.

The calculated base factor (Space Factor) is presented for each discipline for classrooms and teaching laboratories in the far right column on each page. At the bottom of each page, a weighted and unweighted average is calculated and presented. The unweighted average is the simple mean of all the values in the space factor column. The weighted average is derived by applying the proportion of students (far left column of values) in each discipline to that discipline's calculated space factor and adding the results for all disciplines together. In this way, other states' standards/guidelines can be viewed in light of an academic program and enrollment mix similar to California's. The weighted average space factors for classrooms and teaching laboratories are the base factors presented for each state, prototype

system, and student level in Exhibits 4.2, 4.3, 4.4, 5.2, 5.3, and 5.4 of the survey report. Final comparisons are presented in these exhibits after appropriate adjustments have been made for enrollment counting or evening enrollment exclusion differences as described in Appendix A of the survey report. Additional adjustments were required for Florida, Maryland, and Virginia for some categories of space and levels of instruction. These adjustments were to recognize their practice of applying different factors in the formulas dependent on the size of institution. Descriptions of these practices and the calculations of adjustments are presented in this volume of the report immediately preceding the worksheet tables for Florida, Maryland, and Virginia.

### 1.2 *Research Space*

To compare research space standards/guidelines, it was necessary to accomplish two difficult tasks. First, space allowances for a variety of demand units in each state (e.g., FTE faculty, graduate student, teaching assistant, etc.) were crosswalked to a taxonomy of programs similar to that of research universities in California. Second, a weighted average space allowance was calculated for each demand unit based on a distribution of enrollments in the taxonomy similar to California's.

These weighted averages are presented at the bottom of each page in Exhibits 6.14 through 6.24 of the survey report. Applying the weighted average space allowances to the respective demand unit characteristics of the research university system prototype, the total assignable square feet or research space generated by each state's standards/guidelines could be calculated and compared. This comparison is presented in Exhibit 6.26 of the survey report.

### 1.3 *Office Space*

Academic office space standards/guidelines were compared in a way similar to research space standards/guidelines. However, since enrollments in specific disciplines do not affect the calculation of total office space, it was not necessary to include any worksheet tables for this category of space. Total assignable square feet for academic office space was calculated by applying each state's space allowances directly to the respective prototype characteristics. California was the only state that differentiates among disciplines in its academic office and associated support space allowances. This is true for both the California State University and the University of California. As a result, it was necessary to calculate weighted values for California's allowances for academic office space demand units in the state university and research university prototype systems. Exhibits A and B on pages 3 and 4 present the calculations of these weighted values. These values, which include the indicated support space adjustments, are presented in Exhibit 7.1 of the survey report.

# 2 Telephone Screening Survey to Select States for Site Visits

### 1. Directions

Through a series of questions, identify the individual in the state who is most familiar with the state's process for determining the level of capital outlay appropriations for higher education facilities. After identifying the most appropriate person, call that person. Do not accept a substitute, unless it becomes necessary in order to meet project deadlines.

---

### 2. Introductory Statement and Background Information

This is (name of interviewer) from MGT of America, a higher education management research firm. We are conducting a survey of the budgeting practices for higher education and general facilities in other states for the California Postsecondary Education Commission. I would like to ask you a few questions about the facilities budgeting practices in (name of state).

In appreciation for your help, California has indicated that they are willing to share a copy of the study with you. the questions will require about 15 to 20 minutes of your time. If you do not have time now, I would like to schedule a more convenient time when I can call back.

# CALIFORNIA POSTSECONDARY EDUCATION COMMISSION

THE California Postsecondary Education Commission is a citizen board established in 1974 by the Legislature and Governor to coordinate the efforts of California's colleges and universities and to provide independent, non-partisan policy analysis and recommendations to the Governor and Legislature.

### Members of the Commission

The Commission consists of 15 members. Nine represent the general public, with three each appointed for six-year terms by the Governor, the Senate Rules Committee, and the Speaker of the Assembly. The other six represent the major segments of postsecondary education in California.

As of February 1990, the Commissioners representing the general public are:

Mim Andelson, Los Angeles;
C. Thomas Dean, Long Beach;
Henry Der, San Francisco;
Seymour M. Farber, M.D., San Francisco;
Rosalind K. Goddard, Los Angeles;
Helen Z. Hansen, Long Beach;
Lowell J. Paige, El Macero; *Vice Chair;*
Cruz Reynoso, Los Angeles; *Chair;* and
Stephen P. Teale, M.D., Modesto.

Representatives of the segments are:

Meredith J. Khachigian, San Clemente; appointed by the Regents of the University of California;

Theodore J. Saenger, San Francisco; appointed by the Trustees of the California State University;

John F. Parkhurst, Folsom; appointed by the Board of Governors of the California Community Colleges;

Harry Wugalter, Thousand Oaks; appointed by the Council for Private Postsecondary Educational Institutions;

Joseph D. Carrabino, Orange; appointed by the California State Board of Education; and

James B. Jamieson, San Luis Obispo; appointed by the Governor from nominees proposed by California's independent colleges and universities.

### Functions of the Commission

The Commission is charged by the Legislature and Governor to "assure the effective utilization of public postsecondary education resources, thereby eliminating waste and unnecessary duplication, and to promote diversity, innovation, and responsiveness to student and societal needs."

To this end, the Commission conducts independent reviews of matters affecting the 2,600 institutions of postsecondary education in California, including community colleges, four-year colleges, universities, and professional and occupational schools.

As an advisory planning and coordinating body, the Commission does not administer or govern any institutions, nor does it approve, authorize, or accredit any of them. Instead, it cooperates with other State agencies and non-governmental groups that perform these functions, while operating as an independent board with its own staff and its own specific duties of evaluation, coordination, and planning.

### Operation of the Commission

The Commission holds regular meetings throughout the year at which it debates and takes action on staff studies and takes positions on proposed legislation affecting education beyond the high school in California. By law, its meetings are open to the public. Requests to speak at a meeting may be made by writing the Commission in advance or by submitting a request before the start of the meeting.

The Commission's day-to-day work is carried out by its staff in Sacramento, under the guidance of its executive director, Kenneth B. O'Brien, who is appointed by the Commission.

The Commission publishes and distributes without charge some 30 to 40 reports each year on major issues confronting California postsecondary education. Recent reports are listed on the back cover.

Further information about the Commission, its meetings, its staff, and its publications may be obtained from the Commission offices at 1020 Twelfth Street, Third Floor, Sacramento, CA 98514-3985; telephone (916) 445-7933.
